Education

University of Florida, MS in Computer Science | GPA: 4.0/4.0 **Aug 2025 – May 2027**
JNTU, BS in Electronics and Communication Engineering | GPA: 8.61/10.0 **Aug 2018 – Jun 2022**

Work Experience

PrismaP – Intelligent Clinical Care Center **Jun 2026 – Present**
Software Engineer Intern *Gainesville, FL*

- Owned end-to-end features for a patient-facing retrieval-augmented generation (RAG) application supporting a 1,000-patient surgical pilot, translating clinician feedback into Python/FastAPI services, REST APIs, and AWS integrations from design through deployment.
- Reduced p95 response latency to under 2 seconds by profiling asynchronous Python services, optimizing request handling, and eliminating bottlenecks across production workflows.
- Improved clinical question-answering accuracy by 30% across 10,000+ documents by designing retrieval, context-management, evaluation, and model-output validation workflows.
- Accelerated feature turnaround by 25% using Cursor and Claude Code for implementation, debugging, and refactoring, validating generated changes through 200+ automated tests and peer review before production release.

Infosys | Client: Citizens Financial Group **Jul 2022 – Aug 2025**
Software Engineer *Bangalore, India*

- Scaled a financial account-opening platform to more than 1M daily API transactions by building Java and Spring Boot microservices with Kafka, gRPC, REST APIs, PostgreSQL, and Redis.
- Increased API throughput by 70% and reduced p99 latency from 850 milliseconds to under 200 milliseconds by optimizing asynchronous processing, thread pools, database queries, I/O paths, and caching.
- Reduced loan-approval turnaround from 3 days to under 24 hours across 50,000+ annual applications by translating client requirements into services integrating credit-bureau data and real-time eligibility logic.
- Reduced release cycles by 40% by expanding JUnit unit and integration testing, reviewing Java changes, and automating build, test, and deployment validation through Jenkins and GitLab CI/CD.
- Improved incident recovery time by 35% across 3 production environments through log analysis, service metrics, root-cause debugging, and Prometheus/Grafana monitoring.

OneAdvanced **Feb 2022 – Jun 2022**
Software Engineer Intern *Bangalore, India*

- Improved accessibility of enterprise applications by building reusable React components and REST API integrations with keyboard navigation and screen-reader support.

Projects

Electronic Trading Order Matching Engine | *GitHub*

- Sustained 6.25 million orders per second and processed 1 million orders in 160 milliseconds by building a multithreaded C++17 price-time-priority matching engine with 10 concurrent producers and a dedicated matcher.
- Achieved O(1) insertion and cancellation with O(1) matching per fill using flat price-tick arrays, intrusive FIFO queues, hash-indexed order lookup, and recycled node pools.

TraceHawk – Real-Time Data Monitoring Platform | *GitHub* | *Demo*

- Built a real-time monitoring pipeline with a Go collector and 2 Python consumers across 3 Kafka partitions, implementing 4 explainable detectors and a React console for event evidence, timelines, and operational investigation.
- Implemented transactional checkpoints, consumer-ownership fencing, and at-least-once delivery; verified worker, broker, and database recovery against a 108-event replay and simulated infrastructure failures.

Technical Skills

Languages: C++, Java, Python, Go, JavaScript, SQL
Computer Science: Data Structures, Algorithms, Object-Oriented Programming
Systems: Multithreading, Concurrency, Distributed Systems, Linux/Unix
Backend & Data: Spring Boot, FastAPI, REST APIs, gRPC, Kafka, PostgreSQL, Redis
Testing & Delivery: PyTest, JUnit, Git, GitHub Actions, Jenkins, Code Review
AI Development Tools: Cursor, Claude Code, GitHub Copilot

Certifications

AWS Knowledge: AI Driven Development Lifecycle Foundations | *Link*
Oracle Certified: Agentic AI Foundations Associate | *Link*
